

Jessica Chavez

Full Stack Software Engineer

Las Vegas, Nevada

📞 (703) 300-0112 · 💻 jessissoftwareengineer.com

Professional Summary

Full Stack Software Engineer with 4+ years of experience building, scaling, and maintaining production-grade web applications. Specialized in JavaScript and Python ecosystems, cloud-native architectures, and secure payment systems. Brings a strong balance of backend engineering depth and polished UI/UX execution. Highly effective in remote, agile environments, with a reputation for thoughtful system design, clean code, and reliable delivery under evolving business requirements.

Professional Experience

TOIA

Full Stack Software Engineer · Remote, US

March 2021 – January 2024

Technologies: React, Node.js, Express, MongoDB (Mongoose), JavaScript, Redux, Material UI, AWS

- Contributed to the design and implementation of large-scale, production web applications supporting complex business workflows.
 - Researched, evaluated, and integrated multiple third-party APIs to extend platform capabilities and improve system interoperability.
 - Designed and built responsive, user-centered interfaces using React, HTML, CSS, and Material UI, ensuring accessibility and performance best practices.
 - Developed scalable backend services using Node.js, Express, and Mongoose, following modular and microservice-oriented patterns.
 - Engineered complex multi-vendor routing logic and end-to-end user journeys across distributed systems.
 - Implemented Stripe payment processing to support secure, reliable, and scalable transaction flows.
 - Deployed and maintained applications on AWS, including S3-based asset management, and supported CI/CD pipelines via GitHub.
 - Wrote and maintained unit and integration tests using Jest; produced and maintained internal developer documentation with TypeDoc.
 - Worked closely with a small, cross-functional team of engineers and founders, contributing to architectural decisions and technical trade-off discussions.
 - Responded quickly to changing product requirements while maintaining high standards for code quality, reliability, and maintainability.
-

Challego Technology and Designs

Full Stack Software Engineer · Remote, US

July 2024 – Present

Technologies: MERN Stack, TailwindCSS, MongoDB, Express, React, Node.js, Docker, AWS

- Design, develop, and maintain backend services using Node.js and Express to support scalable web applications.
 - Implement secure authentication and role-based authorization systems for multi-user platforms.
 - Integrate Stripe APIs to enable payment processing and complex transaction routing logic.
 - Manage MongoDB databases, including schema design, indexing strategies, and performance optimization.
 - Deploy and operate applications using Docker and AWS infrastructure.
 - Configure and maintain secure, production-ready environments with a focus on reliability and scalability.
-

Education

Kenzie Academy from Southern New Hampshire University

Full Stack Software Engineering Program

- Completed an intensive 12-month, project-based curriculum covering modern front-end and back-end development.
 - Served as Project Manager, Scrum Master, and contributing Software Developer across multiple team-based projects.
 - Built full-stack applications using Python, Django, JavaScript, React, HTML, and CSS.
 - Delivered capstone projects leveraging MERN for front-end development and Django for back-end services.
 - Gained hands-on experience with object-oriented programming, unit testing, virtual environments, RESTful APIs, and authentication systems.
 - Collaborated effectively within fully remote, agile teams, consistently meeting deadlines and project milestones.
 - Led collaborative workflows and participated in technical decision-making and system design discussions.
-

Technical Skills

Languages & Frameworks

Python, Django, JavaScript, React, Node.js, Express, Redux

Frontend

TailwindCSS, HTML, CSS, Material UI

Backend & Databases

MongoDB, PostgreSQL

DevOps & Cloud

AWS (S3 and multi-service deployments), Docker, DigitalOcean, NGINX, GitHub CI/CD Pipelines

Testing & Quality

Jest, Test-Driven Development (TDD), TypeDoc, NPM

Certifications

- Frontend Development Certificate – Kenzie Academy from Southern New Hampshire University (January 2021)
 - Full Stack Development Certificate – Kenzie Academy from Southern New Hampshire University (July 2021)
 - Software Architecture and Design of Modern Large-Scale Systems
 - Software Architecture and Security
